

Rear Rack Installation

June 2019

Step 1. Attach strut to rack with supplied hardware. Hole position depends on tire size and if using fenders.

Step 2. Mount rack/strut to rear drop out.

Step 3. Attach Extension Bars to outside of rack slot as shown using the larger bolts/washers.

Step 4. Attach Extension Bars to threaded inserts on seat stay using end with single hole as shown.

Step 5. Level rack and tighten all bolts.

If your Day 6 has no threaded inserts, you will need to order the Brake Mount Brackets that attach to brake boss. Single hole to rear.

If your Day 6 has disc brakes, you will need to order the Disc Brake Spacer kit.
